

# Stuart Wilson

Creative and forward-thinking London based web developer. I'm passionate about building great user experiences through collaborative working while promoting code reuse and sustainability.

## Experience

### Senior Software Developer

NearForm (Oct 2018 - Present)

At NearForm I've had the privilege to work across open and inner source projects to help push the company's ability to deliver industry leading React and Node.js solutions.

For 2.5 years I worked at TELUS, scaling their existing commerce flows to increase their ecommerce offering. Within my role, I worked closely with the UX designers to develop complex experiences which could scale across products and teams.

Currently I'm developing complex editing features for a global consultancy firm as part of one of their well established cloud products.

### Head of Front End Development

Catch (Oct 2015 - Oct 2018)

At Catch I was instrumental in driving the tech credentials of the agency forward through the applied introduction of modern web technologies and standards. After joining as a Front End Developer I was quickly promoted to Head of Front End Development, where I was responsible for mentoring other developers, driving change and unifying our approach, to reduce internal technical hurdles and drive development phases at a quicker pace.

**Key Clients:** Zoological Society of London / SES / Worldpay / Institute of Physics / Cancer Research UK / Thomas Cook Airlines

### Front End Developer

graze (Aug 2014 - Oct 2015)

### Lead Developer
